Cloud Security Job Description

Title: Cloud Engineer
Location: Remote
Description:

Charlie Inc. is looking for creative professionals to join its now remote-based team. You will work in a collaborative environment that provides industry-leading service with opportunities for enterprise scalability. The ideal candidate will have a clear understanding of cloud deployment and security principles as well as how to integrate cloud solutions with other company projects. Check out the career opportunities at Charlie Inc. today.

Responsibilities:

- Develop and validate standards, practices, and solutions to meet business needs for functionality, security, and regulatory requirements of virtualized software in cloud-based environments.
- Collaborate with other departments and business areas to establish a data management and analytics framework.
- Automate virtualized software solutions leveraging cloud technologies.
- Apply knowledge of security concerns and risks from technical vulnerabilities.

Qualifications:

- 3–4 years of experience with Linux-based systems
- 3 years of experience developing and deploying infrastructure as infrastructure as a service (IaaS) for a major cloud provider such as AWS, Azure, or Google
- Knowledge of cloud infrastructure, security architectures, and practices
- Strong analytical and problem-solving skills
- Proficient with at least one programming language (Python, Java, C, JavaScript, etc.)
- Strong background in information security concepts, secure software design, and network security
- Familiar with networking and protocols such as UDP, TCP, HTTP/HTTPS, IPSEC, BGP, and VLANs
